ProFlightSimulator
Super Quick Start Guide

Take the time to read this guide. You will learn how to start the game fast and how to install aircrafts and scenery.

1. After installing the game, double click on the Pro Flight Simulator Launcher:

2. You will then be presented with the start-up screen:

3. Click on “Start Flying”. This option loads the default aircraft as the Cessna c172p which is an easy aircraft to master in ProFlightSimulator.

4. Please wait patiently while the game loads. You will see this loading screen:
5. Once the game loads, please click on Help -> Start Tutorial

6. Select the tutorial on the right and then click the “Start Tutorial” at the bottom of the screen.

You will be guided step-by-step on how to operate the plane and take-off

Note: Not all aircrafts have the “Start Tutorial” option.
How To Install Scenery or Aircraft?

Click on “More Options” at the main launcher and you’ll see this screen:

Click on “Install Aircraft” or “Install Scenery” and choose the file which you’ve downloaded from the members page.

*Note: Aircraft files are in .zip format and Scenery files are in .tgz format.*

Thereafter, you must click on the “Refresh” button to load the aircraft which you’ve installed.

**NOTE FOR SCENERIES:**

**Note:** When you install new sceneries, do note that some scenery might not contain airports. *As such, no new airports will show on the screen. This is normal.*

However, if you fly to that area, you'll see objects and landscapes. Only certain scenes do contain airport runways so you'll see new airports being loaded on the screen.
